OX Mail

OX App Suite provides you with an appealing email module that is as intuitive and easy to use as possible. OX Mail is both time-efficient and a joy to use. Its clean and user-friendly interface allows you to get started immediately, without any tedious setup or learning. All the features and functions are right at your fingertips, and they are self-explanatory.

OX Mail is strongly focused on usability and efficiency. Whether you need to compose quick replies to email conversations, send more complex messages (with multiple attachments) to email lists, or just scan your inbox, OX Mail makes your work easy and hassle-free.

OX Mail is device-independent: it gives you access from everywhere, with any device, whether you're in the office, on the move, or at home. OX Mail automatically recognizes your device and adjusts its view to your screen size. And for an even more full-featured experience, native smartphone, tablet, and desktop apps are at your disposal.

Choose the layout that works best for you. For organizing your email as you prefer, OX Mail adjusts itself flexibly to your demands: you can choose from horizontal, vertical, list, and conversation views. Increasing your efficiency, a search option enables you to find any message you might need, whether it's in your large inbox or one of your private subfolders.

OX Mail is fully integrated with all other OX App Suite modules. This means that, for example, you can save files directly to OX Drive or share and attach files from it. You can also create appointments or view, store, and update contacts directly from an email message. OX Mail supports it all.

- Various views are available
- The intuitive toolbar enables rapid operations
- Advanced options are available for power users
- The search function covers all folders
- OX Mail is fully integrated with the other OX App Suite modules

Would it help to have all of your email accounts accessible in one place? OX Mail provides the answer: a one-click solution to connect to your other (business or private) email accounts. Simply enter the email address and password, and OX Mail will present every single message for that account in a specific folder. In addition, when composing new email, you can specify which email address to send the message from. Simple.

OX App Suite's unique Halo View feature is one-click information-mining with almost unlimited drill-down. Simply by clicking on a contact from within an email message, you get a comprehensive picture of all data and correspondence associated with that contact:

- All contact details
- The latest email to, from, and carbon-copied to this person
- Recent shared appointments
