OX Portal

OX Portal is your dashboard in OX App Suite. The portal provides a convenient overview covering all the other OX App Suite modules. It presents your latest email, shows upcoming appointments, reminds you of open tasks, and more.

Bringing together several widgets, the portal gives you a preview that covers the entire OX App Suite environment: there's no need to launch OX Mail, OX Calendar, or other applications. The portal even displays more details in a pop-up when you

click on one of the widgets. Another click and it takes you directly to the selected module.

In addition, OX Portal serves as the dashboard for many of your digital touchpoints. All the important things are brought together here in one clear view. It also serves as a central information point: get travel-weather updates, subscribe to relevant social-media feeds, and check the latest news via RSS feeds – all in one place.

Eliminating the hassle of additional login, OX App Suite allows you to manage your information sources centrally from OX Portal.

You're in control of the portal's design and organization. Add the widgets you would like the dashboard to include, and remove the ones you don't need. You can also move widgets and place them in the most efficient order for you. Then just configure the ones you want to use in the portal, and add any desired RSS feeds or third-party widgets.

OX Portal is device-independent and designed to be responsive in any use environment. This means that you can access it from your desktop or laptop PC just as well as from your tablet or smartphone. The tiles will always be displayed in the manner that suits the device and its screen size best. The following widgets are available "out of the box":

- Mail
- Appointments
- Tasks
- Files
- Photos
- Social media feeds
- RSS feeds (for the latest news, weather updates, etc.)
- Additional email accounts

OX Portal provides far more than a view: you can interact directly with the widgets supplied. One click on any widget opens a window that presents details. Additionally, further actions such as replying to new email are available. A second click takes you to the relevant OX App Suite module for more advanced operations.

The portal is the gateway to a fully personalized dashboard. You can design it to match your way of working perfectly. Specific documents or files can be added as widgets, enabling you to open them quickly whenever needed. For the final touch, pin your favorite pictures to your dashboard and create a version that's all your own.
